WIKIPEDIA INTEREST SIGNAL

Astronomy interest on Ukrainian Wikipedia

Is astronomy interest on Ukrainian Wikipedia growing over the two years ending August 2026, and how reliable is the signal?

No edition clears the screening rule. Review article selection or gather more evidence.

INDEXED MONTHLY VIEWS prior 12-month mean = 100

Articles and source links

uk: Астрономія

Screen: >=200 recent views; medium+ reliability; raw growth required; share growth required.

Assumptions: The broad overview article is a proxy for astronomy attention, not all astronomy-related reading. Wikipedia article requests do not measure unique people, product demand, or willingness to pay. The Ukrainian Wikipedia edition is not limited to readers located in Ukraine.

Period 2024-09 to 2026-08. User pageviews, all access; each edition uses the listed articles. Share = article views per million edition views. Missing article months count as zero only where edition traffic exists.

Reliability is a heuristic from coverage, baseline, monthly consistency and spike concentration. Pageviews are neither unique people nor willingness to pay; editions are not countries. Redirects and title changes may split history.
